

# Ready-to-use Organ-on-a-Chip (OoC) *in vitro* models

Pods

Chips

emulate

# Bacterial dynamics

No man is an island – single isolate research should be combined with its community.

*In vivo* and *in vitro* to explain causality

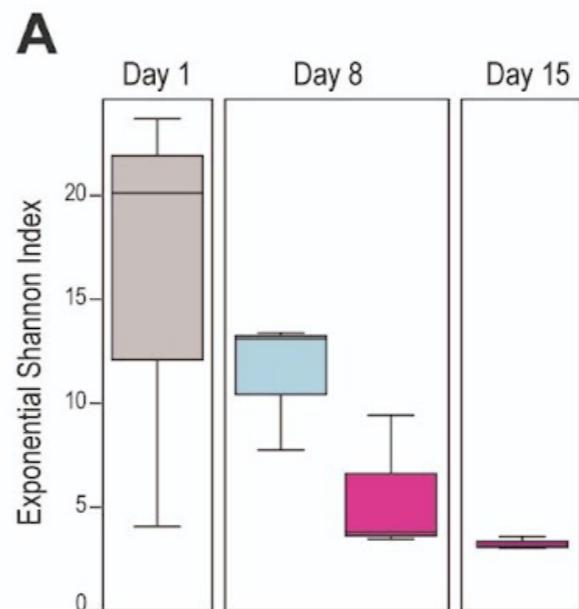

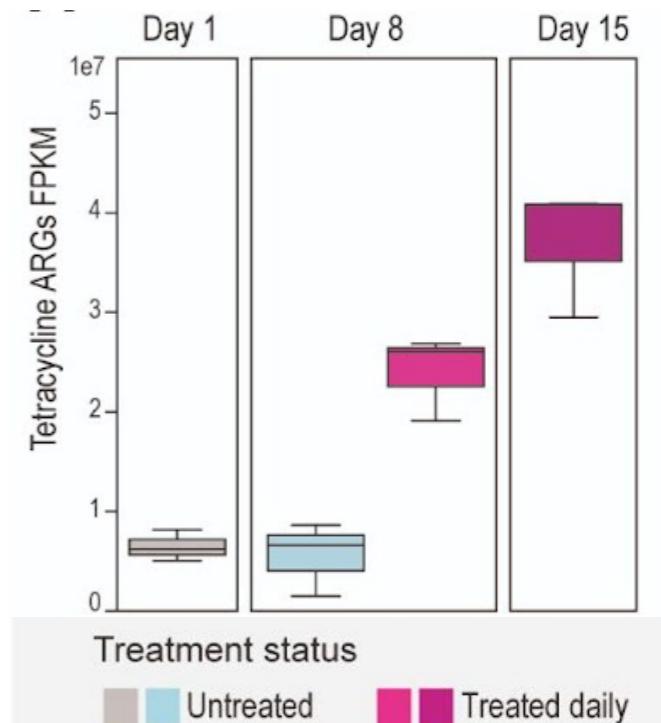

# *In Vivo* models for microbiomes, cockroaches:

Cockroach microbiomes  
(*Pycnoscelus surinamensis*)

Treated and untreated populations – various frequency and concentrations of antibiotics.

Increased Tet resistant with treatment.

Diversity changes same way.

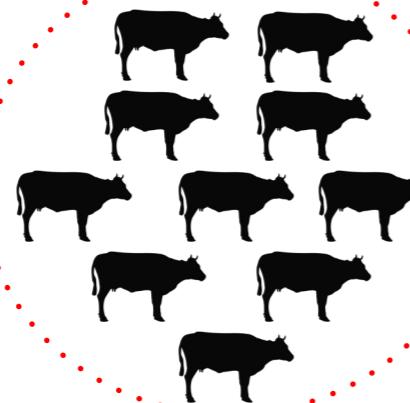

# *In vivo* in cows: *Escherichia coli* dynamics in ruminants

artificial inoculation of *E. coli* mix in calves

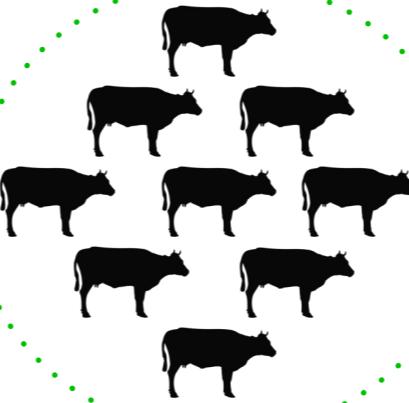

artificial  
inoculation  
*E. coli* mix

TV2 (NJ –  
10 calves)

ctrl vs  
ceftiofur

TV2.2 (GWAS –  
9 calves)

ctrl vs  
ceftiofur

3w

Microbiome changes

2 types of *E. coli* cocktails -  
different colonization properties  
(GWAS vs NJ)

# In Vitro: OoC Emulation System

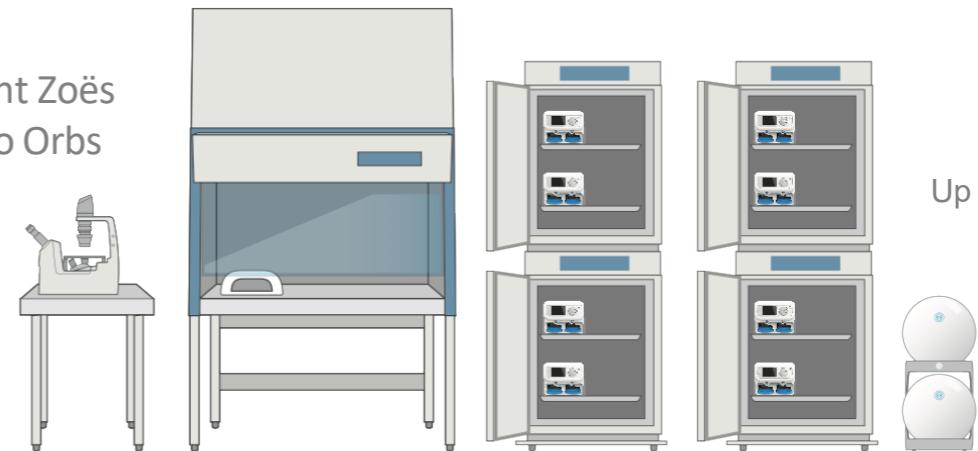

- One ORB can power up to 4 ZOËs.
- One ZOË can support up to 12 chips.

Two Zoës  
One Orb

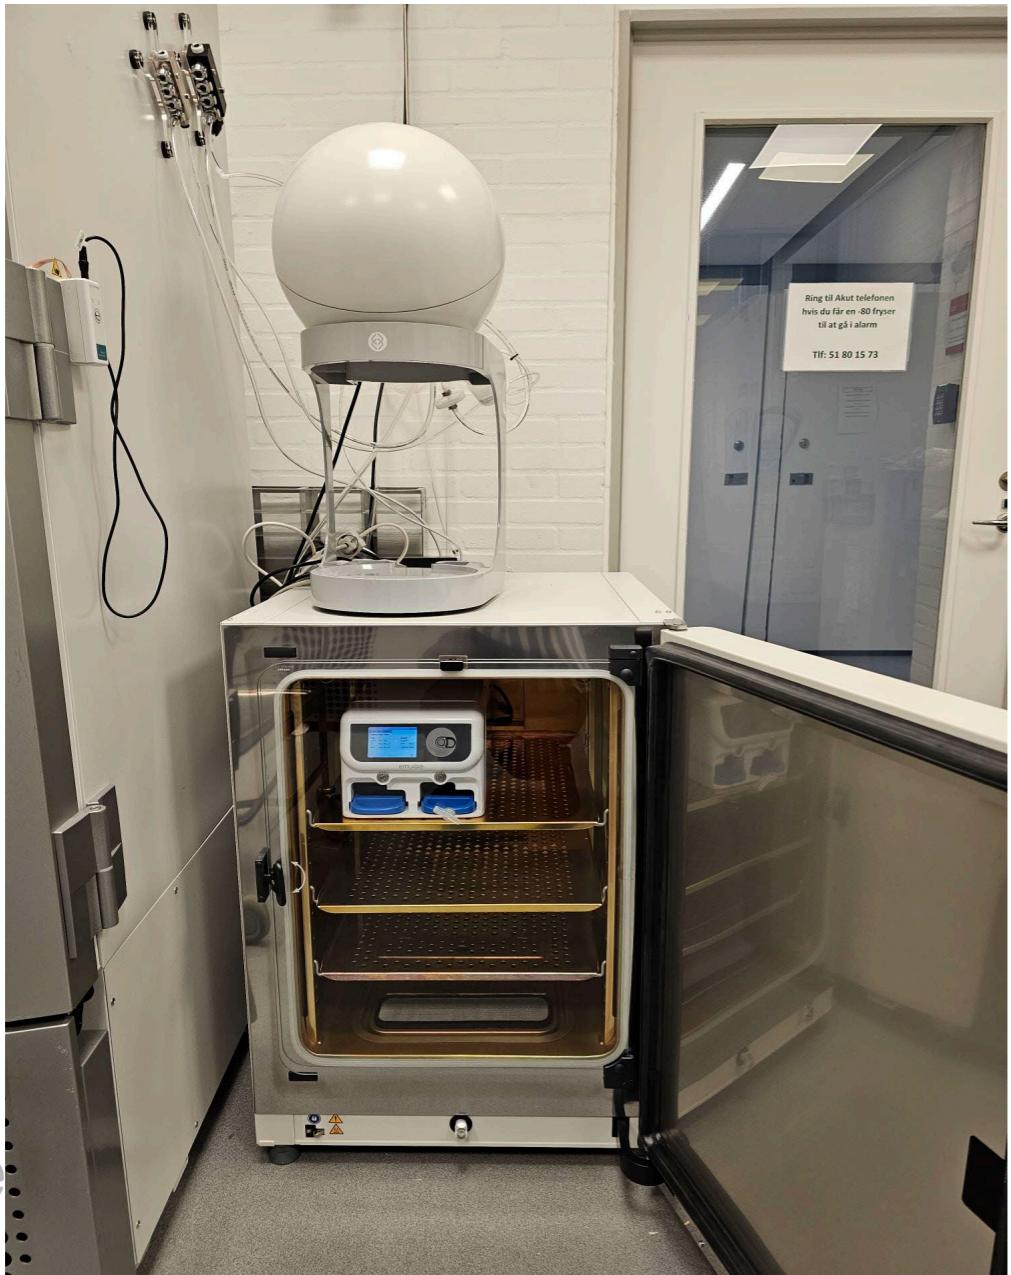

Up to 24 chips

Eight Zoës  
Two Orbs

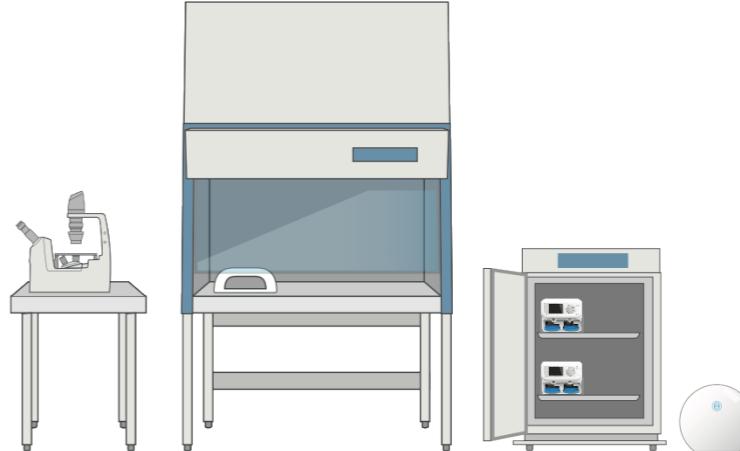

Up to 96 chips

Bacterial community and  
microbiome

# Experimental Design – Colon Intestine-Chip

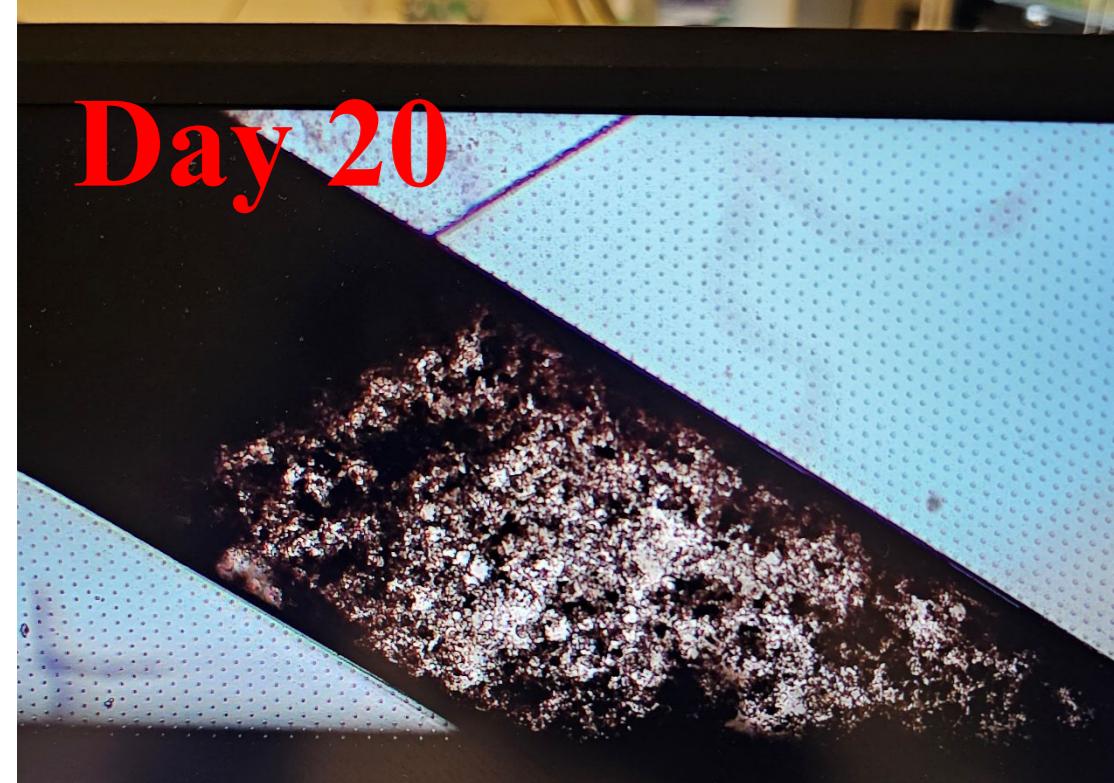

**The experiment happens here ☺**

**Timepoints and Terminal endpoints:**  
**Collection of effluent**  
**Adding more bacteria**  
**treatment**

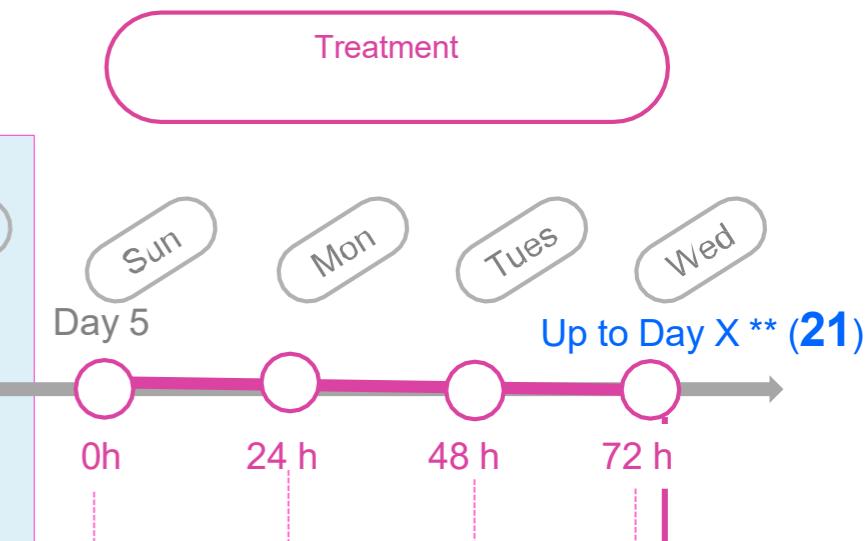

Trial 1: control – *E. coli* wt – *E. coli* cip resis. – (*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*. con.1) - (*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*. con.2) - (*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*, *Pseudomonas*).

\*\* Longevity of chip varies from cell donor to another

# Day 20

## Colon Intestine-Chip

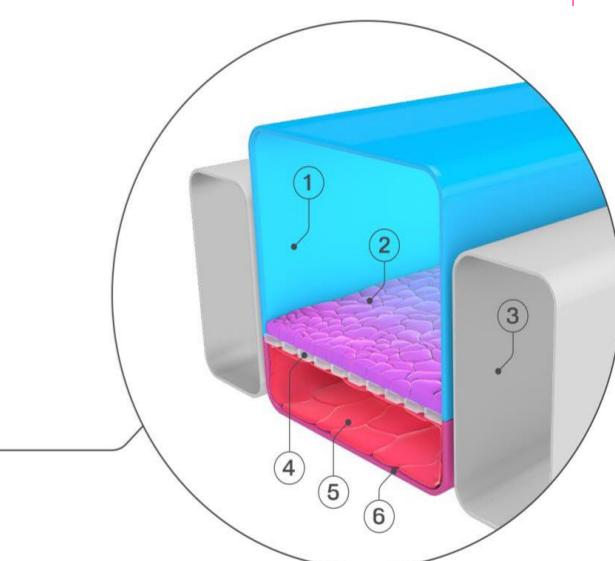

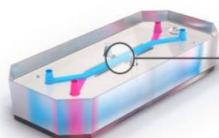

Trial 1: control – *E. coli* wt – *E. coli* cip resis. – (*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*. con.1) - (*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*. con.2) - (*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*, *Pseudomonas*).

CHIP-S1™

stretchable chip

1. Epithelial Channel
2. Human Epithelial Cells
3. Vacuum Channel
4. Membrane
5. Human Endothelial Cells
6. Endothelial Channel

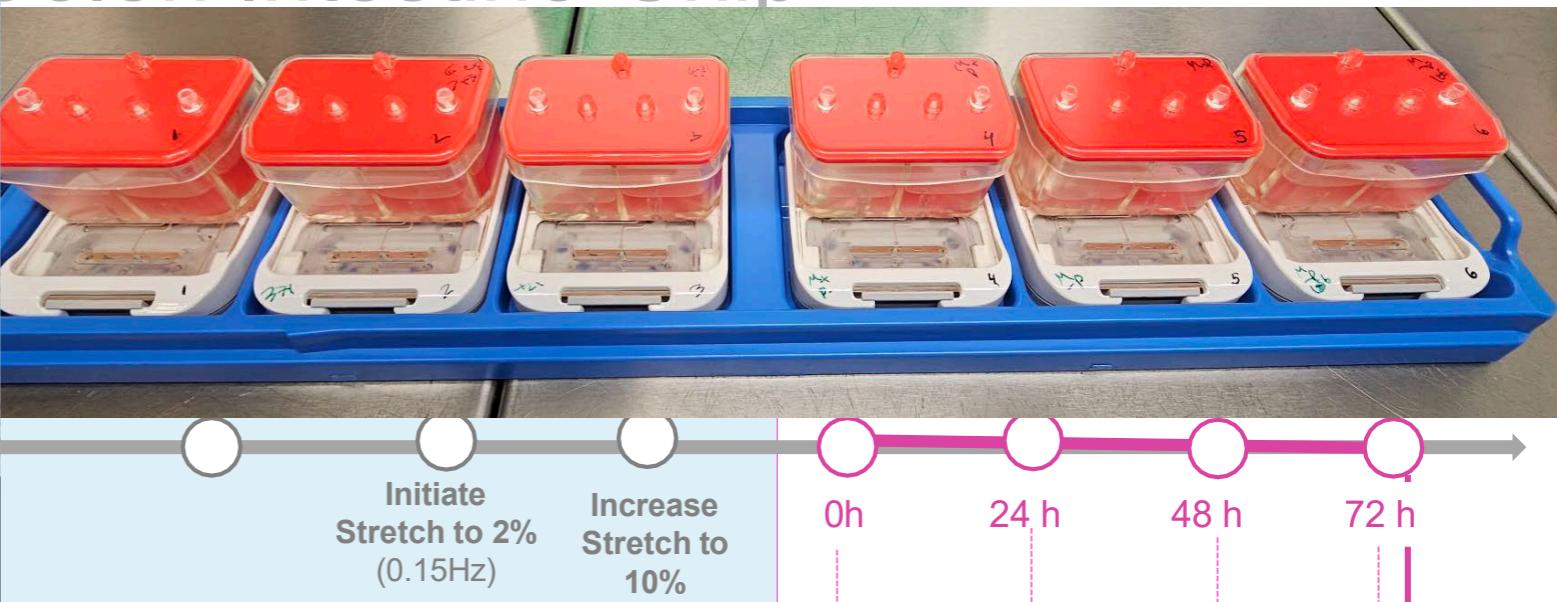

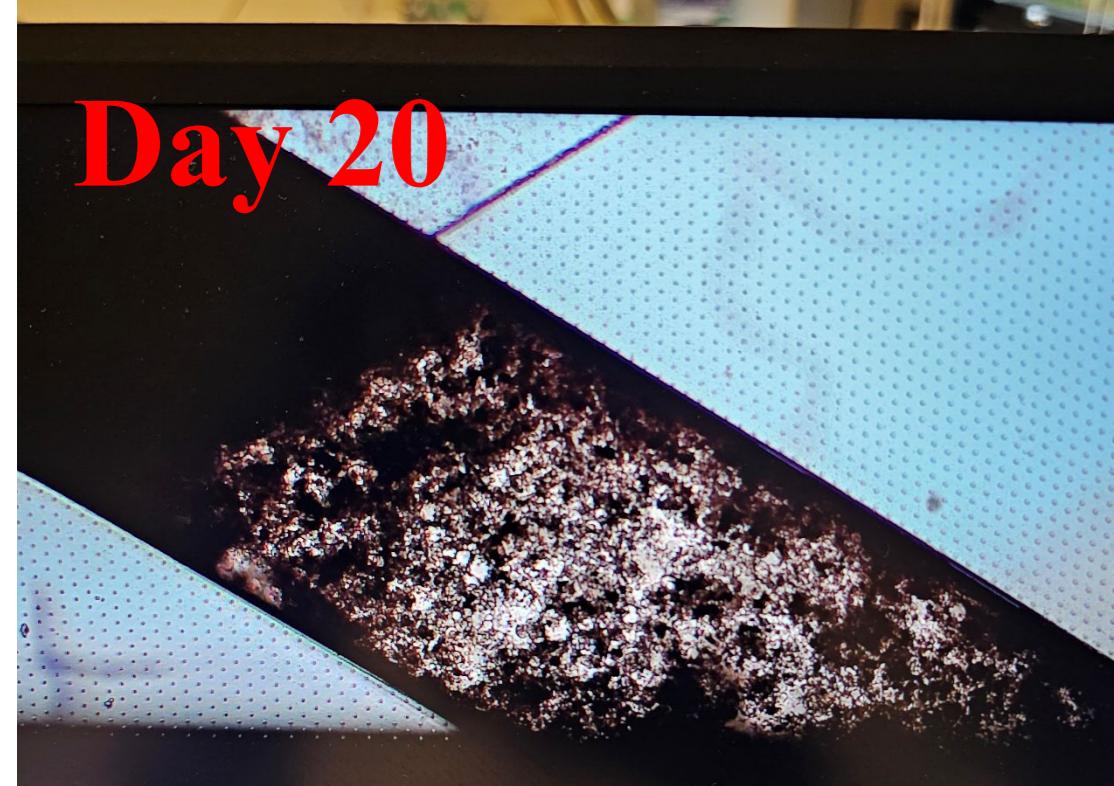

10 days growing.

Sampled the effluent every other day.

# Day 20

## Colon Intestine-Chip

Trial 1: from Friday

*E. coli* wt – *E. coli* cip resis

(*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*. con.1)

(*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*. con.2)

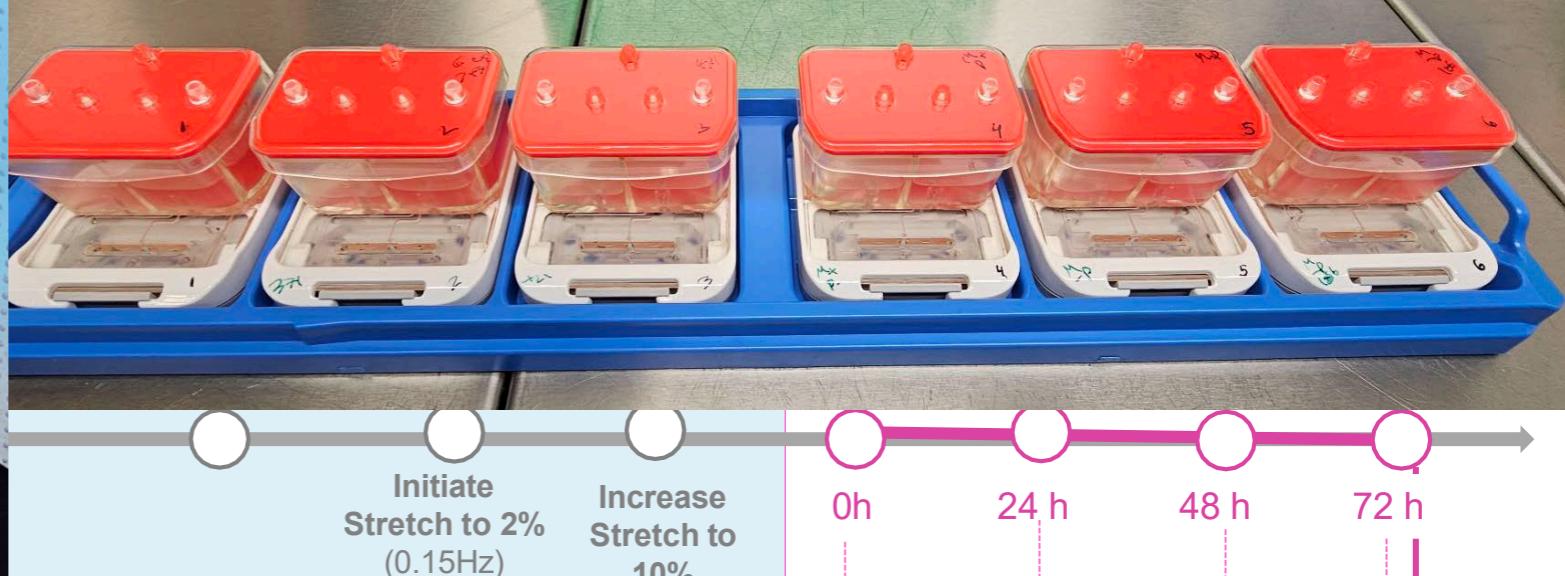

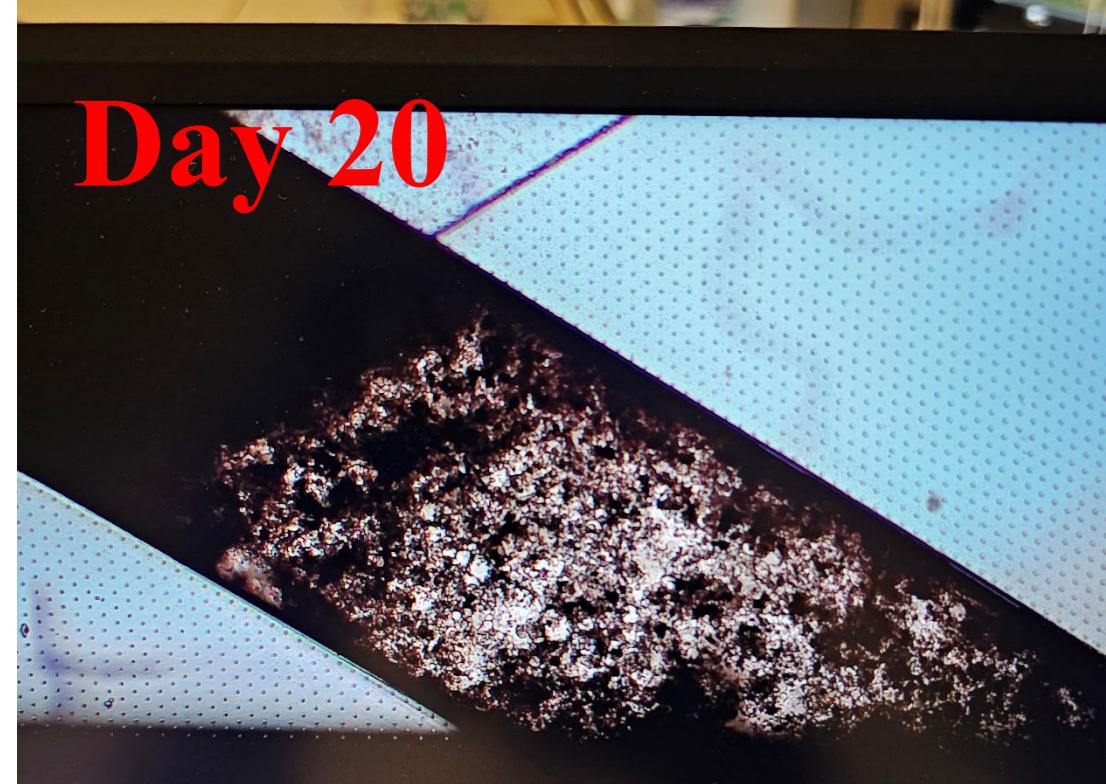

(*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*, *Pseudomonas*).

\*\* Longevity of chip varies from cell donor to another

Timepoints and Terminal endpoints:  
Collection of effluent  
Adding more bacteria  
Treatment

# Day 20

## Colon Intestine-Chip

Trial 2 (next):

Adding *E. coli* pathogens to the mix.

AB treatment

Timepoints and Terminal endpoints:  
Collection of effluent  
Adding more bacteria  
Treatment

\*\* Longevity of chip varies from cell donor to another

Day 20

Colon Intestine-Chip

## Bacteria-bacteria interactions

### Treatment (virulence, ARG)

### More?

Trial 1:

*E. coli* wt – *E. coli* cip resis

(*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*. con.1)

(*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*. con.2)

(*Lactobacillus*, *Collinsella*, *E. faecium*, *Eubacterium*, *Pseudomonas*).
